PROJECTS

❖ **HeadphoneCity➡ E-commerce web Application**
This is an E-commerce web Application of headphones we can add/remove the product in the cart and and we can buy it. I use strapi as a backend in this project.

❖ **News-Junkey- API Based News App**
This is an News App that show Trending news. For making this project we use newsapi.org Api for fetching news. News-Junkey is created using Express js.

❖ **DesireCart**
DesireCart is the Shopping web page that is Created Using Bootstrap.

❖ **Blog-post**
Blog-post is a react blog page that takes input as title and description and stores the title in a slug and stores it in a JSON-SERVER with the current date and shows the blog's title and in another component. When you click on the blog title it shows the full blog, and the title slug show in the URL.
